

## Assumptions

- 1-1 Tutor-Complaint Association
  - Once a Tutor receives a complaint, they are suspended and, for the moment, can no longer receive a complaint
  - Since a complaint is removed from the complaint list, it is no longer associated with a Tutor

## Design Decisions

- actionComplaint function calls either dismissComplaint() or suspendTutor() based on the provided "action" argument
- suspendTutor(Tutor, Date) is located in the Complaint class to have both actions related to a complaint in the same class
